

TOP 5 SAFETY RISKS:

»»» OIL & GAS

Explosions and Fires

01

Flammable gases, vapors, and liquids create constant ignition risks, with even small mistakes leading to catastrophic incidents.

Exposure to Toxic Substances

02

Hydrogen sulfide, drilling fluids, and other hazardous chemicals can cause acute poisoning or long-term health damage without strict controls and PPE.

Transportation and Vehicle Incidents

03

Workers face high risks traveling to and from remote sites, operating heavy equipment, and navigating congested work zones.

Falls and Falling Objects

04

Elevated platforms, rigs, and scaffolding pose serious fall hazards, while dropped tools and equipment endanger those working below.

Confined Space Hazards

05

Storage tanks, pipelines, and process vessels create oxygen-deficient or toxic environments that can quickly become fatal without proper monitoring and rescue plans.
